

RetailCo Business Insights Report (Updated)

Executive Summary

This report presents updated insights from RetailCo's analytics platform following resolution of earlier pipeline issues. The warehouse now contains valid transactional, product, customer, payment, and lifecycle data across Abuja, Kano, Port Harcourt, and Lagos. The latest analysis shows balanced revenue distribution across stores, consistent product performance, stable customer segmentation, controlled payment anomalies, and moderate delivery delays. Overall data quality remains above 98 percent.

Revenue Performance

RetailCo processed approximately 80,000 orders and over 360,000 order line items.

Store Revenue Breakdown: Abuja 16.75B, Kano 16.67B, Port Harcourt 16.34B, Lagos 16.26B. Revenue is evenly distributed across all stores, indicating balanced regional performance.

Customer Behaviour

RetailCo serves approximately 5,000 customers across segments. Premium customers generate higher order value and repeat purchase more frequently than standard customers. Customers transitioning to premium represent a high-value growth segment.

Product Performance

Top SKUs generate between 94M and 115M in revenue with consistent unit sales. Product performance is relatively uniform, with no extreme outliers dominating revenue contribution.

Payment Insights

Digital payments dominate transactions. Payment anomalies include 734 zero-value and 748 negative-value transactions, representing approximately 2 percent of records.

Order Lifecycle

Delivered orders total 48,078 with an average delivery time of approximately 13 days. SLA compliance is limited, indicating opportunities for logistics improvement.

Data Quality

More than 98 percent of records are valid. Payment anomalies remain the primary data quality concern but are isolated from core reporting to preserve accuracy.

Conclusion

RetailCo's analytics platform is now stable and reliable. Key findings include balanced store revenue, consistent product performance, strong customer segmentation behavior, and moderate operational inefficiencies in delivery times.
